STEPHANIE COOKE - DIRECTOR OF TRANSPORTATION
PAM CARTER - DIRECTOR OF FINANCE
RALPH CARPENTER - DIRECTOR OF MAINTENANCE
SUZIE REAGLE - DIRECTOR OF SPECIAL EDUCATION

TO:

The Asbestos Hazard Emergency Response Act (AHERA) of 1986 requires that we provide annual notification to you of the status of Asbestos Containing Materials (ACM) in the School Corporation buildings. Additionally, we are continuing other AHERA required activities to ensure that all remaining ACM is "safely" managed throughout the buildings.

We will be continuing to maintain the semi-annual periodic surveillance schedule. Our next scheduled three-year inspection will be in September of 2012. By law, this re-inspection must be done three years after the original AHERA building inspection and every three years thereafter.

Building materials containing friable asbestos are identified in the Asbestos Inspection and Management Plan which is maintained in each building, as well as the Administration Building. Friable Asbestos Containing Materials (FACM) have been addressed as agreed to in the original Management Plan.

We will continue to inspect all remaining building material containing asbestos each six (6) months. We will respond appropriately to any emergencies and/or changes in the condition of the material.

We are working to provide a safe place for school activities and for you to work. That includes making each building environmentally sound. As part of that effort, we want you to know that we have taken action to control and minimize possible asbestos hazards in each building.

The asbestos inspection and management plans are available upon request.

Sincerely,

Ralph Carpenter
Director of Maintenance

RC/jaz
